

Property Management Web App – Page-by-Page Wireframe

This wireframe describes **layout, sections, and primary UI components** for each page **after login**, assuming an administrator / property manager user.

1. Login (Pre-auth – for context)

Layout - Centered card - App logo - Email - Password - Login button - Forgot password link

2. Dashboard (Post-login Home)

Layout - Top bar: App name | Notifications | User menu - Left sidebar: Main navigation - Main content area

Main Content - KPI row (cards) - Total Properties - Occupied Units / Vacant Units - Rent Collected (Current Month) - Overdue Payments - Alerts panel - Lease expiring soon - Overdue rent - Open maintenance requests - Recent activity feed - Quick actions buttons - + Add Property - + Add Tenant - + Record Payment

3. Properties – List View

Layout - Header: "Properties" - Filters row - Search by address - Property type dropdown - Occupancy status filter - Properties table

Table Columns - Property Name - Address - Type (House / Apartment / Building) - Units - Occupancy % - Actions (View | Edit | Archive)

Primary CTA - + Add Property

4. Property – Detail View

Tabs Layout - Overview - Units - Financials - Documents - Settings

4.1 Overview Tab

- Property summary card
- Address
- Owner
- Total units

- Occupied / Vacant
- Notes section

4.2 Units Tab

- Units table
- Unit number
- Size / rooms
- Rent price
- Status
- Assigned tenant
- Actions
 - Add Unit button

4.3 Financials Tab

- Monthly income chart
- Expenses list
- Net cash flow summary

4.4 Documents Tab

- Folder-style list
- Upload document button

5. Tenants – List View

Layout - Header: "Tenants" - Search bar - Tenants table

Table Columns - Name - Assigned Property / Unit - Lease Status - Rent Amount - Payment Status - Actions
(View | Edit)

Primary CTA - + Add Tenant

6. Tenant – Detail View

Tabs Layout - Profile - Lease - Payments - Maintenance - Documents

6.1 Profile Tab

- Personal info
- Contact details
- Emergency contact

6.2 Lease Tab

- Lease dates
- Rent amount
- Deposit
- Lease status
- Download lease document

6.3 Payments Tab

- Payment history table
- Outstanding balance
- - Record Payment

7. Leases – List View (Optional Separate Page)

Table Columns - Tenant - Property / Unit - Start Date - End Date - Status - Actions

8. Payments & Accounting

8.1 Payments Overview

- Summary cards
- Expected rent
- Collected
- Outstanding
- Payments table

Table Columns - Tenant - Property - Month - Amount - Status - Actions

8.2 Expenses

- Expense list
- Categories
- Attach receipt

9. Maintenance – Requests List

Layout - Header: "Maintenance" - Status filter tabs (New | In Progress | Completed) - Requests table

Table Columns - Property / Unit - Issue - Priority - Status - Assigned vendor - Actions

Primary CTA - + New Maintenance Request

10. Maintenance – Request Detail

- Issue description
 - Photos / attachments
 - Status timeline
 - Cost field
 - Assign vendor dropdown
 - Update status button
-

11. Documents Center

Layout - Left: Folder tree (Properties / Tenants) - Right: Document list

Actions - Upload - Download - Delete - Tag

12. Reports

Report Types - Income by property - Rent arrears - Expenses by category

Controls - Date range picker - Export (CSV / Excel / PDF)

13. Users & Roles

Users Table - Name - Role - Status - Actions

Roles - Admin - Manager - Accountant - Maintenance

14. Settings

Sections - Company profile - Currency & locale - Rent rules - Late fees - Notifications - Security

15. Global UI Elements

- Sidebar navigation
- Top bar user menu
- Notification bell
- Breadcrumbs on detail pages

Notes for Implementation

- Desktop-first recommended
 - Sidebar navigation collapsible
 - Tables sortable & filterable
 - All detail pages follow tab pattern
-

MVP vs Full Version Scope

Minimal Viable Product (MVP)

The MVP is focused on **core property administration**, fast delivery, and validation with real users. No advanced automation.

MVP Pages & Features

Authentication - Login / Logout

Dashboard (Simplified) - Total properties - Occupied vs vacant units - Overdue rent count - Quick links (Properties, Tenants, Payments)

Properties - Property list - Property detail (overview only) - Units per property - Rent amount - Occupancy status

Tenants & Leases - Tenant list - Tenant profile - Basic lease data - Start / end date - Rent amount

Payments - Manual rent payment recording - Payment status (paid / unpaid) - Outstanding balance per tenant

Maintenance (Basic) - Create maintenance request - Status (open / closed)

Documents (Basic) - Upload & download lease PDFs

Settings (Minimal) - Company / landlord name - Currency

MVP Exclusions (Explicitly Out)

- Online payments
- Automated reminders
- Advanced accounting
- Reports & exports
- Multi-role permissions
- Vendor management

MVP Goal

Validate: - Can users manage properties and tenants? - Can rent status be tracked reliably? - Is the navigation intuitive?

Full Version (Complete Product)

The full version is a **production-grade property management platform**.

Full Feature Set

Dashboard (Advanced) - Financial KPIs - Trends & charts - Alerts & notifications - Activity feed

Properties - Multi-building support - Property owners - Compliance tracking - Per-property financials

Units - Detailed attributes - Rent history - Vacancy analytics

Tenants & Leases - Multiple tenants per unit - Lease renewals - Rent increase rules - Deposit tracking - Tenant portal (optional)

Payments & Accounting - Online payments - Automatic rent schedules - Late fees & penalties - Expense tracking - Profit & loss per property - Accounting integrations

Maintenance - Tenant-submitted requests - Vendor profiles - Job assignments - Cost approvals - Maintenance history

Documents - Centralized document center - Tags & search - Access permissions

Communication - In-app messaging - Email notifications - Automated reminders

Reports - Income reports - Arrears reports - Expense breakdowns - Export (CSV / Excel / PDF)

Users & Roles - Role-based permissions - Audit logs

Security & Compliance - Audit trails - Data encryption - Regional compliance settings

Recommended Build Phases

Phase 1 – MVP (8–12 weeks) - Core CRUD - Manual processes - Admin-only access

Phase 2 – Stabilization - UX improvements - Reporting - Notifications

Phase 3 – Full Platform - Automation - Payments - Multi-user roles

Key Product Advice

- Do NOT overbuild before MVP validation
- Design MVP database to support full version later
- Keep all money-related logic explicit and auditable
